

Attorney's Docket No.: 06618-914001

Amendments to the Specification:

Please replace the paragraph beginning at page 8 line [0030] with the following amended paragraph:

[0030] In an embodiment, a device may have the following general characteristics. The pump may have outer dimensions around 3x3x1 inch. The anode may be formed of 20 cylindrical units. A total mass including the magnet is around 600 g. Using this system, pumping speed for nitrogen of about 7 liters per second has been measured. This may be used to evacuate a GCMS 351.
